-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3747

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lehtonen in view of Djordjevic.

Lehtonen teaches all of the limitations of Claim 1 except the first spring is replaced by a fluid chamber which is controlled electrically via a bleed valve.

Djordjevic teaches using a main spring to control primary pressure relief from a fuel pump housing.

It would have been obvious to modify Lehtonen by using a spring on the main valve cone as taught by Djordjevic because the former was simply an improvement over the traditional use of a spring to set the main relief pressure.

Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Lehtonen and Djordjevic as applied to claim 1 above, and further in view of Bartlett.

Bartlett, at Figure 1, teaches a pressure relief valve for an injection pump housing which is mounted at the top of the housing.

It would have been obvious to mount the Lehtonen valve at the top of an injection pump housing because this is where the vapors will migrate and the release of trapped vapors is a primary objective of such valves.

Art Unit: 3747

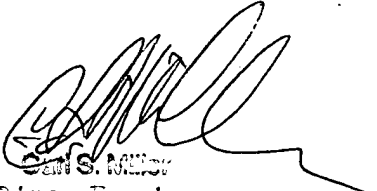

Claims 2-5 and 7-9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
